

# PodScholar

Upload. Listen. Share.

## "About" page:

PodScholar is a platform for scholars to podcast their published work. Each podcast provides the scholar an opportunity to discuss their manuscript with an informative and conversational tone. Each podcast is created by a scholar or research group and each podcast corresponds to one of the scholar's published articles. Scholars are encouraged to discuss all main parts of the published work including, but not limited to the introduction, methods, results and discussion sections. Scholars now have a platform to broadcast their work as a dialogue in which they have autonomy as to how they want to explain and discuss their own scholarship. The rules for podcasting are straight forward, but the most basic rule is one podcast per one published article!

Currently, PodScholar podcasts are limited to a 20-minute maximum duration. Podcasts include the journal link to help listeners find the published article for further reading and dissemination. The PodScholar audio library will increase as more scholars upload their content. Any published scholarship can be podcasted and uploaded, regardless of date published and discipline. PodScholar aims to create the world's largest audio library of scholarly activity which is created and narrated by the professionals who conducted the research. Join the PodScholar community to upload, listen, and share!

**Home Screen** – The home screen should be simple, include the logo with "PodScholar" at the top center. Should also include in the header, a link to register and login.

- If the user is logged in, they're name and dashboard dropdown box should be in the upper right corner.
- "Newest Uploads" should appear to highlight activity and what's new.

2022

DOI: 10.1519/JSC.0000000000003404.

#### **Variability of Competition-Based Caloric Expenditure and Relative Heart in NCAA Women's Basketball**

Gabriel J. Sanders, Brian Boos, Jessica Rhoades, et al.

"Search Results" page is almost identical as the home page, except "Search Result" are specific to the key words used in search.

- There should be pages of search results...perhaps 15 results per page
  - Create a "SAVE" button to add to a user playlist (Ideally)
  - Option to leave a rating (5 star scale) after a podcast is listened to (Ideally)
- The audio links need to be cohesive and clearly part of the tile/authors/journal part...Maybe located first since this is the premise for the website. The example below would need to be improved for visual cohesiveness.
